

Using at least 20 lines, write things about how the corona virus pandemic will affect the future of IT.

The virus spread like a virus on the web, in a way that no one imagined how tragic and inevitable its effectiveness and fatality would be, given the past and future scenario, we had both advantages and disadvantages in this apocalyptic scenario.

Unfortunately in the world of technology the virus has tended to anticipate countless steps from years to the present and much of what is yet to emerge after this event, since people have never depended as much on technology as these last two years and this is increasing every day, because with the passing of days technology advances in such a fast and effective way, that in a matter of days, the technology we studied or know of a few months ago, is already archaic and the market and the world already uses other technology to update itself and to advance every day more. The IT market tends to grow by increasing usability, ease, communication, automation and the best, creativity, everything has become so visible and clear, that professionals from other areas such as human, are deciding to migrate to the technological world, because the market has heated, opportunities are in full swing and technology has no expiration date to end. Humanity has much to face and learn from past and present, technology is so essential to our lives, as well as to hydrate, can save lives and more, depending on each situation and every scenario in which your country consists, we currently live a war that technology has provided, this is a disadvantage for humanity, because using significant values to massacre and decimate your own people is indisputable, so it is not a political thing, but it involves technology and the future itself.

Not everything is flowers, just as technology has its advantages, has its disadvantages, unfortunately the human being uses technology to influence and practice violence, however it is something that occurs since the beginning of time, so I believe that it is not a problem of time but of humanity.
